Dear Martyn

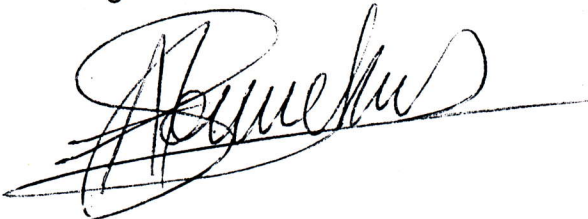

Just reporting I have had some excellent results using **Corrosion X**.

There was a mobile radio completely water damaged. I took it apart and sprayed **Corrosion X** onto the logic boards and PA stage, waited for about 10 minutes and re-assembled the radio. When rf checks were performed on the radio it was on spec and it worked.

I have also used it on microphone inputs and other electronic equipment.

We definitely must order some more, it's magic.

Regards

Allen Sonnekus
